

That always was and will be an important detail of an interior in multi-level premises . Its appearance and arrangement determines an impression of all interior in general a lot. Steps are a constituent details of the ladder which create the whole picture as a result. The main requirement to a ladder and its steps is the safety of its use.

Our company offer the profiled treads and, thanks to its high quality, you will be able to order the production of practically any treads. Their production is made from all types of gratings and by those sizes which are necessary for the embodiment of your ideas in life. Our profile will allow to make treads for you – details of a spiral staircase, and to deliver them to you with a bush sleeve or without, or simpler options. Treads from our profile are extremely easy in mounting by means of holes on side plates. The profile on which they are fasten can be both from metal, and from wood as that is required by your project.

In production of our goods we don't forget about safety – according to DIN 24531 regulation all gratings are delivered and made by us, are supplied with the perforated safety edge.

The attentive relation to details always marks out the real master from the environment of those who only calls themselves masters .The use of our profile will allow you to make any treads the most simply and conveniently.
